## Abstract

To minimize call traffic and the generated support tickets within a call center, the Boy Scouts of America (BSA) is looking to assist their end users by deploying a user-friendly support chat bot that integrates with their online resources on their website. The purpose of this project was to develop a conversational chat bot that would resolve the most common end user issues when using BSA's deployed platforms. This task was accomplished by utilizing Amazon Web Services (AWS), BSA APIs, and the data team's APIs.

**Keywords:** API, AWS, Chat bot, Boy Scouts of America

## Architecture

## Performance Metrics

- Main feature, password reset functionality implemented in chatbot environment
- Integrated all APIs provided by data team

## Impact

- The chat bot engages in a conversation with the end user to resolve their issues.
- Implementation of the chat bot minimizes BSA's call volume.
- Reduces human error by automating tasks such as a password reset.
