The services offered by our SMS Test Harness allow the user to send messages to various clients with the ability to choose from various different options provided by each vendor. By providing an intuitive user interface that is familiar with most users, the test harness allows users to make the most out of all the information provided, as well as gathering useful statistics based on vendor. These statistics will drive the decision making process in order to determine which vendor provides the services and capabilities that the user is looking for.

The project will help by providing valuable information regarding various companies that offer a mass SMS service. Our research and implementation environment allowed us to gather valuable knowledge regarding the various vendors, the services they offered, the comparative differences between each one, and provides a good base of information for companies looking to create a uniformed platform. The services and experience gathered allows us to give an unbiased approach towards a companies needs regarding SMS services.
