Fully Automated Cranial Windows
Give users immediate access to handless surgical procedures, eliminating human-induced errors

**Rapid**
Automated surgeries are performed faster than by surgeons

**Rigorous**
Cranial thinnings created clearly and smoothly to ensure clarity under microscope

**Reliable**
Transforms irregular human errors into reliably dimensioned results in a fraction of the time

**Sharper**
Highly accurate z-axis can move down in 10 microns steps

**Simpler**
Standalone controls ensure accurate procedures done with minimal training

**Safer**
Conductive feedback ensures animal safety from start to finish in each operation
